ELSEVIER

Chemical Engineering Journal 85 (2002) 389–393

Chemical Engineering Journal

www.elsevier.com/locate/cej

Subject Index of Volume 85

ACN/C4
Process improvement on separating C4 by extractive distillation, 379
Acorga M5640
Copper separation from nitrate/nitric acid media using Acorga M5640 extractant. Part I: solvent extraction study, 259
Copper separation from nitrate/nitric acid media using Acorga M5640 extractant. Part II. Supported liquid membrane study, 265
Activated carbon
Regeneration of exhausted activated carbon by electrochemical method, 81
Adsorption
Effect of catalytic surface curvature on the chemical performance with defect structures, 41
Regeneration of exhausted activated carbon by electrochemical method, 81
Alkaline solution
Influence of cell construction on the electrochemical reduction of nitrate, 99
Alternating current
Electrostatic enhancement of coalescence of water droplets in oil: a review of the technology, 357
25, 40 and 25 + 40 kHz
Kinetics of *p*-nitrophenol degradation: effect of reaction conditions and cavitational parameters for a multiple frequency system, 327
Axial dispersion coefficient
On the effect of tracer density on axial dispersion in a batch oscillatory baffled column, 17

Bacillus sp.
Biosorption of Cr^{6+}, Pb^{2+} and Cu^{2+} ions in industrial waste water on *Bacillus* sp., 351
Baffles
Local mass-transfer distribution in the channels of a serpentine flow baffled parallel plate cell, 119
Basic data
Estimation of excess enthalpy for binary systems, 235
Batch crystallizer
Production of large crystals with a narrow crystal size distribution by a novel WWDJ batch crystallizer, 161
Control of solvent-mediated transformation of crystal polymorphs using a newly developed batch crystallizer (WWDJ-crystallizer), 169
Batch reactor
Optimal operation policies in batch reactors, 313
Batch-settling experiment
Determination of a coalescence parameter from batch-settling experiments, 369
Bidisperse adsorbent
Dynamics of non-isothermal adsorption in packed bed of biporous zeolites, 245
Biosorption
Biosorption of Cr^{6+}, Pb^{2+} and Cu^{2+} ions in industrial waste water on *Bacillus* sp., 351
Bubbles
Experimental analysis of a single vapor bubble condensing in subcooled liquid, 197

Carbon felt electrode
Effect of pulsed flow on the performance of carbon felt electrode, 153
Catalyst activation
Effect of catalytic surface curvature on the chemical performance with defect structures, 41
Catalytic pervaporation
Catalytic membrane reactor to simultaneously concentrate and react organics, 303
Cathode
Influence of cell construction on the electrochemical reduction of nitrate, 99
Cell type
Influence of cell construction on the electrochemical reduction of nitrate, 99
Centrifugal force
Electrostatic enhancement of coalescence of water droplets in oil: a review of the technology, 357
Chain-transfer agent
Dynamic optimization of non-linear emulsion copolymerization systems. Open-loop control of composition and molecular weight distribution, 339
4-Chlorophenol
Catalytic membrane reactor to simultaneously concentrate and react organics, 303
Chromatography
Process development of product recovery and solvent recycling steps of chromatographic separation processes, 273
CO_2 hydrogenation
Simulation of CO_2 hydrogenation with CH_3OH removal in a zeolite membrane reactor, 53
Coalescence
Determination of a coalescence parameter from batch-settling experiments, 369
Comminution
Changes of surface and volume properties of calcite during a batch wet grinding process, 177
Condensation
An inverse approach for estimation of the surface heat flux distribution on a horizontal elliptical tube with laminar film condensation, 189
Experimental analysis of a single vapor bubble condensing in subcooled liquid, 197
Conjugated Graetz problem
A study of mass transfer efficiency in a parallel-plate channel with external refluxes, 207
Control polymorphs
Control of solvent-mediated transformation of crystal polymorphs using a newly developed batch crystallizer (WWDJ-crystallizer), 169

PII: S1385-8947(01)00308-4

Copolymer composition
Dynamic optimization of non-linear emulsion copolymerization systems. Open-loop control of composition and molecular weight distribution, 339
Copper
Copper separation from nitrate/nitric acid media using Acorga M5640 extractant. Part II. Supported liquid membrane study, 265
Copper(II)
Copper separation from nitrate/nitric acid media using Acorga M5640 extractant. Part I: solvent extraction study, 259
Coriandrum sativum L.
Modélisation du transfert de matiére lors de l'extraction de l'huile essentielle des fruits de coriandre, 1
Corona discharge
Modeling of pulsed corona discharge process for the removal of nitric oxide and sulfur dioxide, 87
Critical permeation flux
Stability of latex crossflow filtration: cake properties and critical conditions of deposition, 27
Crossflow filtration
Stability of latex crossflow filtration: cake properties and critical conditions of deposition, 27
Crystal size distribution
Production of large crystals with a narrow crystal size distribution by a novel WWDJ batch crystallizer, 161
Control of solvent-mediated transformation of crystal polymorphs using a newly developed batch crystallizer (WWDJ-crystallizer), 169
Crystallization
Production of large crystals with a narrow crystal size distribution by a novel WWDJ batch crystallizer, 161

Deionization
Continuous deionization of a dilute nickel solution, 127
Deposition
Stability of latex crossflow filtration: cake properties and critical conditions of deposition, 27
Desorption
Effect of catalytic surface curvature on the chemical performance with defect structures, 41
Disinfection
New UV irradiation and direct electrolysis—promising methods for water disinfection, 111
Dispersions
Electrostatic enhancement of coalescence of water droplets in oil: a review of the technology, 357
DMF/C4
Process improvement on separating C4 by extractive distillation, 379
Downstream processing
Process development of product recovery and solvent recycling steps of chromatographic separation processes, 273
Drag coefficient
Experimental analysis of a single vapor bubble condensing in subcooled liquid, 197
Dynamic optimisation
Optimal operation policies in batch reactors, 313

Effluent treatment
The role of electrochemistry and electrochemical technology in environmental protection, 137
Electric fields
Electrostatic enhancement of coalescence of water droplets in oil: a review of the technology, 357
Electrochemical flow cell
Local mass-transfer distribution in the channels of a serpentine flow baffled parallel plate cell, 119
Electrochemical method
Free convective mass transfer at up-pointing truncated cones, 147
Electrochemical processes
The role of electrochemistry and electrochemical technology in environmental protection, 137
Electrochemical regeneration
Regeneration of exhausted activated carbon by electrochemical method, 81
Electrocoalescence
Electrostatic enhancement of coalescence of water droplets in oil: a review of the technology, 357
Electrodialysis
Continuous deionization of a dilute nickel solution, 127
Electrolysis
New UV irradiation and direct electrolysis—promising methods for water disinfection, 111
Electrolytic reactor
Effect of pulsed flow on the performance of carbon felt electrode, 153
Electroplating and surface finishing industry
The role of electrochemistry and electrochemical technology in environmental protection, 137
Emulsion polymerization
Dynamic optimization of non-linear emulsion copolymerization systems. Open-loop control of composition and molecular weight distribution, 339
Enantiomers
Process development of product recovery and solvent recycling steps of chromatographic separation processes, 273
Essential oil
Modélisation du transfert de matiére lors de l'extraction de l'huile essentielle des fruits de coriandre, 1
Esterification
Ethyl oleate synthesis by *Porcine pancreatic* lipase in organic solvents, 61
Ethyl oleate
Ethyl oleate synthesis by *Porcine pancreatic* lipase in organic solvents, 61
Excess enthalpy
Estimation of excess enthalpy for binary systems, 235
Extraction
Modélisation du transfert de matiére lors de l'extraction de l'huile essentielle des fruits de coriandre, 1
Extractive distillation
Process improvement on separating C4 by extractive distillation, 379

Facilitated transport
Effect of pulsed flow on the performance of carbon felt electrode, 153
Film drainage
Determination of a coalescence parameter from batch-settling experiments, 369
Fixed bed
Dynamics of non-isothermal adsorption in packed bed of biporous zeolites, 245
Flow regime diagram
A numerical study of flow and mixing characteristics of laminar confined impinging streams, 215
Fouling
Stability of latex crossflow filtration: cake properties and critical conditions of deposition, 27
Free convection
Free convective mass transfer at up-pointing truncated cones, 147
Frequency
Electrostatic enhancement of coalescence of water droplets in oil: a review of the technology, 357
Frequency effects
Kinetics of *p*-nitrophenol degradation: effect of reaction conditions and cavitational parameters for a multiple frequency system, 327

Gas adsorption
Dynamics of non-isothermal adsorption in packed bed of biporous zeolites, 245

Heat and mass transfer
Heat and mass transfer in the evaporating film of a molecular evaporator, 225
Heat flux
An inverse approach for estimation of the surface heat flux distribution on a horizontal elliptical tube with laminar film condensation, 189
Heat of adsorption
Dynamics of non-isothermal adsorption in packed bed of biporous zeolites, 245
Heat transfer
Free convective mass transfer at up-pointing truncated cones, 147
Heat transfer coefficient
Experimental analysis of a single vapor bubble condensing in subcooled liquid, 197
Heavy metal biosorption
Biosorption of Cr^{6+}, Pb^{2+} and Cu^{2+} ions in industrial waste water on *Bacillus* sp., 351
Heavy metal contamination
Biosorption of Cr^{6+}, Pb^{2+} and Cu^{2+} ions in industrial waste water on *Bacillus* sp., 351
Heavy metals
Biosorption of Cr^{6+}, Pb^{2+} and Cu^{2+} ions in industrial waste water on *Bacillus* sp., 351
Hot spot temperature
Theoretical study of the application of porous membrane reactor to oxidative dehydrogenation of *n*-butane, 69
Hydrodynamics
Local mass-transfer distribution in the channels of a serpentine flow baffled parallel plate cell, 119

Inert membrane reactor
Theoretical study of the application of porous membrane reactor to oxidative dehydrogenation of *n*-butane, 69
In-line mixer
A numerical study of flow and mixing characteristics of laminar confined impinging streams, 215
Inverse approach
An inverse approach for estimation of the surface heat flux distribution on a horizontal elliptical tube with laminar film condensation, 189
Ion exchange assisted electrodialysis
The role of electrochemistry and electrochemical technology in environmental protection, 137
Ion-exchange
Continuous deionization of a dilute nickel solution, 127
Iterative dynamic programming
Dynamic optimization of non-linear emulsion copolymerization systems. Open-loop control of composition and molecular weight distribution, 339

L-aspartic acid
Production of large crystals with a narrow crystal size distribution by a novel WWDJ batch crystallizer, 161
Latex
Stability of latex crossflow filtration: cake properties and critical conditions of deposition, 27
Least-squares method
An inverse approach for estimation of the surface heat flux distribution on a horizontal elliptical tube with laminar film condensation, 189
L-glutamic acid
Control of solvent-mediated transformation of crystal polymorphs using a newly developed batch crystallizer (WWDJ-crystallizer), 169
Liquid–liquid dispersion
Determination of a coalescence parameter from batch-settling experiments, 369

Mass transfer
Local mass-transfer distribution in the channels of a serpentine flow baffled parallel plate cell, 119
Free convective mass transfer at up-pointing truncated cones, 147
A study of mass transfer efficiency in a parallel-plate channel with external refluxes, 207
Mathematical model
Modeling of pulsed corona discharge process for the removal of nitric oxide and sulfur dioxide, 87
Maxwell–Stefan theory
Verification of the Maxwell–Stefan theory for tracer diffusion in zeolites, 7
MD simulation
Verification of the Maxwell–Stefan theory for tracer diffusion in zeolites, 7
Membrane transport
Copper separation from nitrate/nitric acid media using Acorga M5640 extractant. Part II. Supported liquid membrane study, 265
Methanol
Simulation of CO_2 hydrogenation with CH_3OH removal in a zeolite membrane reactor, 53
Micro-porous membrane reactor
Simulation of CO_2 hydrogenation with CH_3OH removal in a zeolite membrane reactor, 53
MMA/*n*-BA
Dynamic optimization of non-linear emulsion copolymerization systems. Open-loop control of composition and molecular weight distribution, 339
Model
Optimal operation policies in batch reactors, 313
Modelling
Modélisation du transfert de matiére lors de l'extraction de l'huile essentielle des fruits de coriandre, 1
Estimation of excess enthalpy for binary systems, 235
Molecular distillation
Heat and mass transfer in the evaporating film of a molecular evaporator, 225
Molecular evaporator
Heat and mass transfer in the evaporating film of a molecular evaporator, 225
Momentum/mass equations
A simple model for turbulent boundary layer mass transfer on flat plate in parallel flow, 35
Multivariable control
Structural design and operation of a fully thermally coupled distillation column, 289
MWD
Dynamic optimization of non-linear emulsion copolymerization systems. Open-loop control of composition and molecular weight distribution, 339

Nickel ions
Continuous deionization of a dilute nickel solution, 127
Nitrate acid
Copper separation from nitrate/nitric acid media using Acorga M5640 extractant. Part I: solvent extraction study, 259
Nitrate/nitric acid
Copper separation from nitrate/nitric acid media using Acorga M5640 extractant. Part II. Supported liquid membrane study, 265
Nitrates
Influence of cell construction on the electrochemical reduction of nitrate, 99

Nitric oxide
Modeling of pulsed corona discharge process for the removal of nitric oxide and sulfur dioxide, 87
Non-isothermal
Dynamics of non-isothermal adsorption in packed bed of biporous zeolites, 245
p-NP
Kinetics of *p*-nitrophenol degradation: effect of reaction conditions and cavitational parameters for a multiple frequency system, 327
Numerical analysis
Effect of catalytic surface curvature on the chemical performance with defect structures, 41
Numerical solution
Dynamics of non-isothermal adsorption in packed bed of biporous zeolites, 245

Onset of instability
A numerical study of flow and mixing characteristics of laminar confined impinging streams, 215
Opposing jets
A numerical study of flow and mixing characteristics of laminar confined impinging streams, 215
Optimal operation
Optimal operation policies in batch reactors, 313
Optimization
Dynamic optimization of non-linear emulsion copolymerization systems. Open-loop control of composition and molecular weight distribution, 339
Orthogonal expansion techniques
A study of mass transfer efficiency in a parallel-plate channel with external refluxes, 207
Oscillatory baffled column
On the effect of tracer density on axial dispersion in a batch oscillatory baffled column, 17
Oxidative dehydrogenation
Theoretical study of the application of porous membrane reactor to oxidative dehydrogenation of *n*-butane, 69

Parallel plate cell
Local mass-transfer distribution in the channels of a serpentine flow baffled parallel plate cell, 119
Partial competitive biosorption
Biosorption of Cr^{6+}, Pb^{2+} and Cu^{2+} ions in industrial waste water on *Bacillus* sp., 351
Path constraint
Optimal operation policies in batch reactors, 313
Periodic flows
Effect of pulsed flow on the performance of carbon felt electrode, 153
Petlyuk column design
Structural design and operation of a fully thermally coupled distillation column, 289
Petlyuk column operation
Structural design and operation of a fully thermally coupled distillation column, 289
Plug flow with axial dispersion model
On the effect of tracer density on axial dispersion in a batch oscillatory baffled column, 17
Polymer membrane reactor
Catalytic membrane reactor to simultaneously concentrate and react organics, 303
Porcine pancreatic lipase
Ethyl oleate synthesis by *Porcine pancreatic* lipase in organic solvents, 61
Process improvement
Process improvement on separating C4 by extractive distillation, 379
Process intensification
Effect of pulsed flow on the performance of carbon felt electrode, 153
Process simulation
Process development of product recovery and solvent recycling steps of chromatographic separation processes, 273
Pulsed
Modeling of pulsed corona discharge process for the removal of nitric oxide and sulfur dioxide, 87
Pulsed direct current
Electrostatic enhancement of coalescence of water droplets in oil: a review of the technology, 357

Radial dispersion
Theoretical study of the application of porous membrane reactor to oxidative dehydrogenation of *n*-butane, 69
Recycle
A study of mass transfer efficiency in a parallel-plate channel with external refluxes, 207
Reduction
Influence of cell construction on the electrochemical reduction of nitrate, 99
Regeneration of metal
The role of electrochemistry and electrochemical technology in environmental protection, 137
Relative volatility
Heat and mass transfer in the evaporating film of a molecular evaporator, 225

Schmidt number
A simple model for turbulent boundary layer mass transfer on flat plate in parallel flow, 35
Separation
Simulation of CO_2 hydrogenation with CH_3OH removal in a zeolite membrane reactor, 53
Electrostatic enhancement of coalescence of water droplets in oil: a review of the technology, 357
Simulated-moving-bed
Process development of product recovery and solvent recycling steps of chromatographic separation processes, 273
Solvent extraction
Copper separation from nitrate/nitric acid media using Acorga M5640 extractant. Part I: solvent extraction study, 259
Sonolysis
Kinetics of *p*-nitrophenol degradation: effect of reaction conditions and cavitational parameters for a multiple frequency system, 327
Steam distillation
Modélisation du transfert de matiére lors de l'extraction de l'huile essentielle des fruits de coriandre, 1
Stirred bead mill
Changes of surface and volume properties of calcite during a batch wet grinding process, 177
Structural design
Structural design and operation of a fully thermally coupled distillation column, 289
Sulfur dioxide
Modeling of pulsed corona discharge process for the removal of nitric oxide and sulfur dioxide, 87

Tanks-in-series model
On the effect of tracer density on axial dispersion in a batch oscillatory baffled column, 17
Thermally coupled distillation
Structural design and operation of a fully thermally coupled distillation column, 289
Thermodynamics
Estimation of excess enthalpy for binary systems, 235
Tracer density
On the effect of tracer density on axial dispersion in a batch oscillatory baffled column, 17

Tracer diffusion
Verification of the Maxwell–Stefan theory for tracer diffusion in zeolites, 7
Transformation
Control of solvent-mediated transformation of crystal polymorphs using a newly developed batch crystallizer (WWDJ-crystallizer), 169
Truncated cone
Free convective mass transfer at up-pointing truncated cones, 147
Turbulent mass transfer
A simple model for turbulent boundary layer mass transfer on flat plate in parallel flow, 35
Two-dimensional model
Dynamics of non-isothermal adsorption in packed bed of biporous zeolites, 245

Ultrasonic wave
Kinetics of *p*-nitrophenol degradation: effect of reaction conditions and cavitational parameters for a multiple frequency system, 327
UV irradiation
New UV irradiation and direct electrolysis—promising methods for water disinfection, 111

VLE
Process improvement on separating C4 by extractive distillation, 379

Wall Wetter
Production of large crystals with a narrow crystal size distribution by a novel WWDJ batch crystallizer, 161
Control of solvent-mediated transformation of crystal polymorphs using a newly developed batch crystallizer (WWDJ-crystallizer), 169
Waste water
Biosorption of Cr^{6+}, Pb^{2+} and Cu^{2+} ions in industrial waste water on *Bacillus* sp., 351
Water treatment
New UV irradiation and direct electrolysis—promising methods for water disinfection, 111
Water-in-oil emulsions
Electrostatic enhancement of coalescence of water droplets in oil: a review of the technology, 357
Wet grinding
Changes of surface and volume properties of calcite during a batch wet grinding process, 177
Wiped film
Heat and mass transfer in the evaporating film of a molecular evaporator, 225
WWDJ batch crystallizer
Production of large crystals with a narrow crystal size distribution by a novel WWDJ batch crystallizer, 161
Control of solvent-mediated transformation of crystal polymorphs using a newly developed batch crystallizer (WWDJ-crystallizer), 169

Yield
Simulation of CO_2 hydrogenation with CH_3OH removal in a zeolite membrane reactor, 53

Zeolites
Verification of the Maxwell–Stefan theory for tracer diffusion in zeolites, 7
